

SpamTag puts SPAM back where it belongs— in the trash—and puts time back in your day.

SPAM—Tag it, trash it or save it for reading later. The user gets to choose. AlphaData SpamTag identifies “spam,” whether solicited or unsolicited commercial email, using a wide range of heuristic tests and rule sets applied to mail headers and body text.

Features

- **Wide-spectrum:** SpamTag uses a wide variety of local and network tests to identify spam signatures.
- **Easy to configure:** SpamTag is configured using a web browser and the user can set the rule weights, blacklists and whitelist.
- **Flexible:** SpamTag is designed to work with any SMTP based email server currently in service including Exchange.

The spam-identification tactics used include:

- **Header analysis:** spammers use a number of tricks to mask their identities, fool you into thinking they’ve sent a valid mail, or fool you into thinking you must have subscribed at some stage.
- **Heuristic text analysis:** spam mail typically has a characteristic style disclaimer.
- **Common spam word lists:** SpamTag identifies common word and phrases typically used by spammers such as “Make easy money,” “Click here to unsubscribe,” etc.
- **Rule sets:** SpamTag supports different rule sets used to help identify spam. Each rule set’s weight ranking and total spam value can be set by the administrator.
- **Blacklists:** SpamTag supports many useful existing blacklists, such as • mail-

abuse.org, • ordb.org or others. Individual spam sites can be easily added to the list.

- **Whitelists:** The SpamTag administrator can easily exempt certain addresses from the spam processing via the whitelist.

What can AlphaData SpamTag do?

SpamTag is a program for inspecting and modifying e-mail messages as they pass through your mail stream.

Web based reports:

- See totals for legitimate mail related to spam.
- Ranking of spam offenders with easy black list interface.
- Productivity analysis by employee—identify who gets the most spam.
- Easy site white list exemption.
- Graphical analysis.

Backup Service

We offer backup subscription over the internet to protect your configuration.

Warranty

We warrant the product for one year including overnight replacement at no additional charge. This includes all software upgrades for the first year.

If you subscribe to the backup service, we will reload your configuration before shipping.

Caveat

There are some caveats you should be aware of before using SpamTag. SpamTag potentially alters e-mail messages. This could cause problems, for example, with encrypted or signed messages.

Low Maintenance

SpamTag requires very little configuration; you do not need to continually update it with details of your mail accounts, mailing list memberships, etc. It accomplishes filtering without this knowledge, as much as possible.

SpamTag can be managed with a browser from any desktop.

SpamTag is an Internet appliance that sits in front of your existing Exchange or other mail server.
